# MOVIS LightBoxes

MOVIS LightBoxes combine three of our passions: design diversity, light and functionality, in the form of their sound absorption properties. Each LightBox can be rotated in four directions and mounted at two different distances from the wall. This allows for overlapping and interlocking, which provides for energizing three-dimensionality.
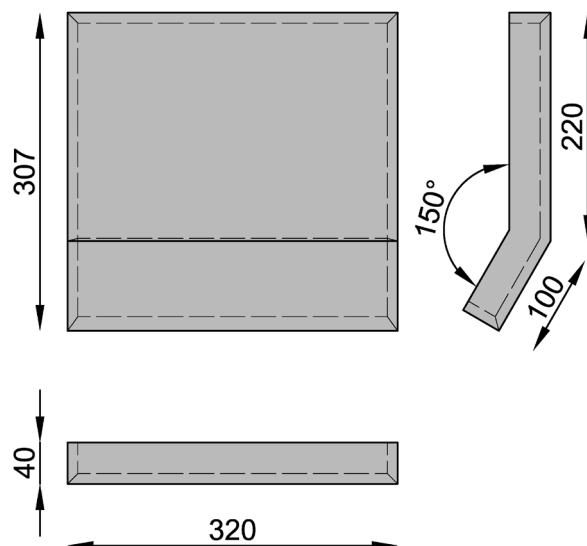

Material

Nitona

Nitona is a material developed specifically for the absorption of sound and it conforms to OEKO-TEX Standard 100 as well as the fire-retardant norm DIN EN 1350-1. Nitona is 100% recyclable and is made in Germany.

Production: A variety of sizes, shapes and prints are available. Please contact us for further infomation.
